

Hammock hanging Kit Instructions

This kit includes two 10' straps and two quick links.

Hanging Instructions

Select the trees where you'll hang your hammock. The ideal distance between trees is 14'-15' for woven hammocks and 12'-13' for net hammocks;

Approximately 4'6" from the ground, wrap the strap around the tree by putting the ring end through the stitched eye. Make it snug.

Continue to wrap the strap around the tree until there is not enough length to do it again

Hook the quick link through the ring of the strap and the ring of the hammock. Close quick link completely.

Repeat for the opposite tree.

Check periodically for wear, replace when needed
